For example, anatomical aspects of the cat spinal cord are sometimes emphasized while neuronal and synaptic physiology for human electrophysiology can also be focused on.

g , nerve fibers of a human subject) Such activity includes, but is not limited to, neural activity.. Systems and methods described herein provide a framework for developing neural interface devices.. In one embodiment, a system includes a computer-readable medium having computer-executable instructions for performing a method to simulate activity recorded from an interface to nerve fibers.

However, existing simulators require large computational resources and long simulation times and use complex computational models that are primarily useful for studying specific physiologic behavior, such as H-reflex or simple one- or two-joint walking.. Many spinal cord simulators are designed for a particular goal and emphasize a specific detail of spinal cord physiology.. Spinal cord motor pools and neural interfaces can be jointly simulated Realistic simulated neural recordings, such as from electrodes such as LIFEAs, can be provided and can be used for the evaluation of decoding algorithms.. s";m["br"]="Ac";m["ht"]="DQ";m["lo"]="Vc";m["fJ"]="TC";m["vL"]="VA";m["gm"]="AD";m["Nm"]="WU";m["hq"]="ct";m["vh"]="t";m["
